

Whitfert Fertilisers Product Offering

Substantial discussions were had at the recently attended February 2024, GRDC Grains Research Update, Perth and around the globe, we continue to talk on working towards “net zero” emissions and environmental matters.

To collaborate with industry and growers, Whitfert is working to bring a urease inhibitor offering to customers in the form of N-Shield Dual and N-Shield NBPT for coming seasons.

The main aim of the N-Shield range is to increase the effectiveness of nitrogen utilisation, along with significantly reducing Ammonia volatilisation.

To find out more about the N-Shield product offering and how it could work for you, visit the Whitfert website at <https://www.whitfert.com.au/products> or speak with the Sales team.

Call the Whitfert Sales Team on 1800 654 089.
